205 IAC 1-5-2 Dimensional requirements
Authority: IC 9-21-9-5
Affected: IC 9-21-9

Sec. 2. Dimensional requirements. The size shall be as shown in Fig. 1.
205 IAC 1-5-3 Color and reflectivity requirements

Authority: IC 9-21-9-5
Affect: IC 9-21-9

Sec. 3. Color and reflectivity.
(1) The spectrophotometric color values of the yellow-orange fluorescent material shall have a dominant wavelength of 590-610 millimicrons and a purity of 98 percent before test. After Durability Test, paragraph 6.2, the dominant wavelength of the fluorescent material shall not change more than 10 percent.

(2) The reflective material shall have minimum intensity values of each of the angles listed per Table 1. After Durability Test, paragraph 6.2, the minimum reflective intensity values for the reflective material shall not change more than 20 percent from the values specified in Table 1.

* [Measurements shall be conducted in accordance with photometric testing procedures for reflex-reflectors as specified in Society of Automotive Engineers Standard, SAE J594, Reflex Reflectors, and using 50, ± 5 sq. in. (322.6, ± 32.3 sq. centimeters) of reflective material. The maximum dimension of the test surface shall not be greater than 1.5 times the minimum dimension. The Reflective Intensity (R) is computed from the equation.]

\[
R = \frac{L_r(d)^2}{L_s(A)}
\]

where

- \( R \) = reflective intensity, candlepower per incident foot-candle per square foot
- \( L_r \) = illumination incident upon receiver at observation point, foot-candles
- \( L_s \) = illumination incident upon a plane perpendicular to the incident ray at the test specimen position, foot-candles
- \( d \) = distance from test specimen to source of illumination (100 ft. as specified in SAE J594), feet
- \( A \) = area of test surface, square feet

205 IAC 1-5-4 Durability requirements

Authority: IC 9-21-9-5
Affected: IC 9-21-9

Sec. 4. Durability.
(1) The reflective and fluorescent materials shall be tough, flexible and of sufficient thickness and strength to meet the requirements of rules 5 and 6. After the Durability Test, paragraph 6.2, the fluorescent and reflective material shall show no appreciable discoloration, cracking, crazing, blistering, loss of durable bond, or dimensional change.
(2) Backing material for portable identification emblems shall be equivalent to 0.040 in. (0.1016 millimeters) minimum thickness aluminum, 22-gage (0.030 in. or 0.76 mm) minimum thickness mill-galvanized or coated sheet steel with the surface clean and receptive to a durable bond. The backing material shall be free of burrs.

NOTE: These requirements are minimal and do not preclude the use of materials having superior performance.

Rule 6. Procedures

205 IAC 1-6-1 Test standards

Authority: IC 9-21-9-5
Affected: IC 9-21-9

Sec. 1. The emblem shall be tested in conformance with the following sections from SAE J575, Tests for Motor Vehicle Lighting Devices and Components:
Section B–Samples for Tests  
Section D–Laboratory Facilities  
Section E–Vibration Test  
Section H–Corrosion Test (pertains to face of emblem only).  

205 IAC 1-6-2 Durability test  
Authority: IC 9-21-9-5  
Affected: IC 9-21-9

Sec. 2. Durability test. Samples shall be exposed to the sun at an angle of 45 deg. to horizontal and facing south per American Society for Testing and Materials, ASTM D1014, Method of Conducting Exterior Exposure Tests of Paints on Steel.
