(b) The commissioner may request additional information from an owner/operator to complete the written determination in subsection (a).

(c) All CFOs required to conduct ground water monitoring must comply with the requirements of this section.

(d) Owners/operators of a manure storage facility shall develop and follow a written ground water monitoring plan. This plan must:

The owner/operator shall make these statistical determinations each time the owner/operator collects samples.

(e) If the owner/operator determines under subsection (d)(3)(G) that there is a statistically significant increase for parameters at any monitoring device, the owner/operator shall notify the commissioner of this finding in writing within fourteen (14) days. The notification must indicate what parameters have shown statistically significant increases over background levels. The department may then require corrective action.

(f) Owners/operators must submit the results of ground water monitoring to the department within sixty (60) days of sampling.

(g) Required monitoring must be conducted throughout the active life of the storage facility. - (1) covered or adequately bermed to prevent run-on or runoff;
- (2) applied to the site within ninety (90) days;
- (3) set back from property lines and public roads one hundred (100) feet; and

(1) within three hundred (300) feet of surface water, drainage inlets, including water and sediment control basins, or water wells unless there is a:

(A) barrier; or

(B) surface gradient that contains or directs any contaminated runoff away from the waters of the state, drainage inlets, including water and sediment control basins, or water wells;

(2) on any area with a slope greater than six percent (6%), unless run-on and runoff is controlled;

(3) on any standing water or waterway; or

(4) in any flood plain for more than seventy-two (72) hours.

(c) Solid manure, litter, or contaminated bedding may not be placed outside of any approved manure storage facility at the CFO overnight for more than twenty-four (24) hours or during inclement weather.

(d) The application of manure is prohibited in the following conditions:

(1) Saturated ground.

(2) Manure applied from manure application equipment operating on a public road.

Injection or incorporation of manure into the soil on the same day is allowed.

(f) CFOs not described in subsection (e) may surface apply manure on frozen or snow covered ground in accordance with subsections (g) through (i). Injection or incorporation of manure into the soil on the same day is allowed.

(C) equipment failure; or

(D) structural failure.

(2) The need to apply manure to maintain required storage capacity due to improper design or management of the manure storage facility, including a failure to properly account for the volume of manure to be stored is not considered an emergency.

(h) The following requirements apply to all emergency land application of manure on frozen or snow covered ground:

(1) The person must notify the appropriate department field office by telephone prior to the application.

(2) The following information must be provided or the notification is not considered complete:

operating record.

(3) The manure must be applied in accordance with all land application requirements of this rule and additionally, may only be applied on a field where the following conditions are met:

(4) Once the emergency is abated, land application of manure must cease to frozen or snow covered ground.

(i) For a CFO that is not a large CAFO with one hundred twenty (120) days or less of approved storage capacity, the commissioner may authorize application of manure to frozen or snow-covered ground on a case-by-case basis. The CFO must:

- (1) provide proof of available storage capacity to the commissioner; and
- (2) comply with subsection (h)(3).

This authorization terminates when a discharge to waters of the state or a water quality violation is documented.

(j) Manure must not be applied to highly erodible land unless:

- (1) the land has forty percent (40%) residue protection or crop cover; or
- (2) it is applied in accordance with a conservation plan described in section 3(f)(13) of this rule.

(k) Any manure application, except those described in subsection (l), that causes a water quality violation:

- (1) is a violation of this article; and
- (2) may result in enforcement action.

(l) Subsection (k) does not apply to organic or inorganic matter that consists of fertilizer material that:

(1) is contained in:

- (A) runoff from a storm event; or
- (B) irrigation return flow; and

(2) enters waters of the state as a result of land application of the fertilizer material that is:

- (A) for agricultural purposes;
- (B) done at appropriate agronomic rates for proper nutrient uptake in the field;
- (C) applied in accordance with this rule; and
- (D) documented.

Authority: IC 13-13-5-1; IC 13-15-1-2; IC 13-15-2-1

Affected: IC 13-18-10

Sec. 5. (a) Spray irrigation of manure and process wastewater must be conducted to prevent equipment leaks and excessive application. Application is deemed excessive when the application rate exceeds the infiltration rate of the soil where the application is occurring.

(b) Application must be conducted:

- (1) under the constant supervision of a person; or
- (2) with devices to detect pressure loss due to leaks and devices to shut down the system if leaks are detected.

(c) Manure and process wastewater must not be applied by spray irrigation to any land that has less than twenty (20) inches of soil above the bedrock.

(d) Spray irrigation in a flood plain is prohibited unless the following conditions are met:

---

CONFINED FEEDING OPERATIONS

---

- (1) The setback from surface water is increased to two hundred (200) feet.
- (2) Spraying is only done during months that the NRCS soil data mart indicates have a low potential for flooding.
- (3) There is no expectation of flooding, based on:
  - (A) available weather forecast information; and
  - (B) rainfall or flood conditions upstream of the land application area.
- (4) A spray irrigation plan is completed, which must be kept in the operating record and includes the following:
  - (A) A map of the flood plain area.
  - (B) A timeline of when the spraying will occur.
  - (C) A description of the methods used in subsection (b).

Affected: IC 13-15; IC 13-18-10; IC 13-30

Sec. 6. (a) Except as otherwise provided under this section, application of manure and process wastewater must be in accordance with the setbacks in Table 1: Manure Application Setback Distances, from Indiana NRCS Conservation Practice Standard 590: Nutrient Management, October 2013\*, as follows:

- (1) All setback distances must be measured from the edge of the area of actual placement of manure or process wastewater on the land.
- (2) The property line setback distances in this subsection may be waived in writing by the owner of the adjoining property.
- (3) The setback is the width of the filter strip if a properly designed and maintained filter strip of at least fifty (50) feet in width is located between the application site and any of the following:
  - (A) Surface water.
  - (B) Any known private well.
  - (C) The surface opening or lowest point of any sinkhole.
  - (D) Any drainage inlet, including water and sediment control basins.
- (4) The setback is ten (10) feet if a gradient barrier is located between the application site and any of the following:
  - (A) Surface water.
  - (B) Any known well.
  - (C) The surface opening or lowest point of any sinkhole.
  - (D) Any drainage inlet, including water and sediment control basins.
- (b) To ensure that manure and process wastewater are not applied before, during, or immediately following a rain event that, when combined with soil conditions, would likely result in runoff, the owner/operator must take into account the:
  - (1) weather forecast and likelihood of precipitation events for the twenty-four (24) hour period before and after the application; and
  - (2) site soil conditions.
- (c) Land application sites must be inspected to identify any field tile outlets, grassed waterways, and surface water conveyance channels under or immediately bordering the land application site as follows:
  - (1) Monitoring of identified field tile outlets, waterways, and surface water conveyance channels must occur during and immediately following land application of the manure or process wastewater based on:
    - (A) color;
    - (B) flow;
    - (C) volume and volume change; and
    - (D) odor and change in odor.
  - (2) If there is evidence of manure or process wastewater discharging from the field tile outlet, the land application must cease immediately and the flow must be stopped or captured. Any flow that is captured must be either land applied or returned to an approved manure storage facility.

(d) The monitoring activities conducted in accordance with subsection (c) must be documented and placed in the operating record.
