- (3) shown on the plat with a number of significant figures representative of the precision of the work.

(c) The measurement specifications contained in subsection (d) will apply for all retracement surveys and original surveys.

(d) The following specifications shall be used for the location of property boundaries with respect to the referenced controlling corners:

| Class of Survey | Theoretical Uncertainty (tu) |
|-------------------|----------------------------------|
| A | plus or minus .10 feet |

865 IAC 1-12-8 Theoretical uncertainty

Authority: IC 25-21.5-2-14

Affected: IC 25-21.5

Sec. 8. (a) The following prescribed formulas for the theoretical uncertainty calculations are designed to show the probable average uncertainty of the points in a survey.

(b) Theoretical uncertainty is used to determine compliance with an established minimum standard. Its principal use is to provide a standardized figure to show the relative accuracy of a given procedure when compared to a minimum standard.

(c) The following four (4) equations shall be used to compute the theoretical uncertainty for all of the points of a survey:

(1) Equation I is to be used to calculate the uncertainty of a point contributed by random angular error. The equation is shown in subsection (d).

(2) Equation II (either “a” (EDM) or “b” (taping)) is to be used to calculate the uncertainty of a point contributed by random distance error. The equations are shown in subsections (e) through (f).

(3) Equation III is to be used to calculate the uncertainty of any point or points observed from an individual setup by choosing the larger of the results of Equation I or II. The equation is shown in subsection (g).

(4) Equation IV is to be used to calculate the uncertainty of the points in a survey of (N) points. The equation is shown in subsection (h).

(d) Angular error under Equation I of theoretical uncertainty, shown as “AE”, is the dimension, measured perpendicularly to the left or right of the observed line, which occurs from the random errors made in measuring an angle. It is dependent of the distance observed, the accuracy (least division of direct reading) of the instrument used, and the number of times that the angle was observed. Equation I is as follows:

$$AE = \text{dist} \times \sin (AVE)$$

Where: dis = distance observed
 AE = angular error
 AVE = error (in seconds) as shown in Table I

| TABLE I | |
|---|--|
| AVE | |
| Least Division of Theodolite or Transit | |
| Number of Pairs* | 1 sec 6 sec 10 sec 20 sec 30 sec 60 sec |
| 1 | 4.7 4.9 5.0 7.0 8.7 10.0 |
| 2 | 3.9 4.1 4.2 5.9 7.3 8.4 |
| 3 | 3.5 3.7 3.8 5.3 6.6 7.6 |
| 4 | 3.3 3.4 3.5 4.9 6.1 7.1 |
| 6 | 3.0 3.1 3.2 4.5 5.5 6.4 |
| 8 | 2.8 2.9 3.0 4.1 5.1 5.9 |

*Note: Number of pairs is the number of direct/reverse pairs of angles observed.

(e) Distance error (EDM) under Equation IIa of theoretical uncertainty, shown as DE(a), is the positive or negative error along

the EDM observed line. It is dependent upon the accuracy of the instrument used and the distance measured. The distance error to be expected may be found in the operation manual of the instrument and shown as a standard deviation. Equation IIa is as follows:

$$DE(a) = A + (B \times \text{dist})$$

Where: DE(a) = distance error (from EDM) measurement
 A and B = constants supplied by the manufacturer
 dist = distance measured

(f) Distance error (taping) under Equation IIb of theoretical uncertainty, shown as DE(b), is the positive or negative error along the taped line. An empirical form of that equation is as follows:

$$DE(b) = 0.01 \sqrt{n} + n/200$$

Where: DE(b) = distance error (from taping)
 n = number of full and partial tape lengths

(g) Theoretical uncertainty (for one (1) point) under Equation III of theoretical uncertainty is as follows:
 tu = AE or DE(a or b) (whichever is larger)

Where: tu = theoretical uncertainty of one (1) point

(h) Theoretical uncertainty of any point of a string under Equation IV of theoretical uncertainty is as follows:

$$tu = \sqrt{tu_1^2 + tu_2^2 + \dots + tu_n^2}$$

Where: tu = theoretical uncertainty of the points in a survey of (N) points

(2) Record document description of the parcel surveyed and any new, modified, or consolidation description with an explanation in the surveyor's report as to why the new description was done, together with a statement regarding the location of the new description relative to the record description. If necessary to define the location, a vicinity map shall be provided.

(3) North arrow, area, and scale, including a graphic scale.

(4) Angles or bearings. When bearings are shown, their basis shall be indicated.

(5) All pertinent dimensions. On dimensions other than those measured, sufficient notations shall be used to identify their source, such as the following:

(A) Recorded measurement (Rec).

(B) Calculated from record values (Calc. Rec.).

- (6) All pertinent monuments, with a notation indicating which were found and which were set, including those required to be set by section 18 of this rule, identified as to their character, size, and location including their location relative to the surface of the ground. 865 IAC 1-12-18 Original and retracement survey monumentation

Authority: IC 25-21.5-2-14

Affected: IC 25-21.5

Sec. 18. (a) When conducting a retracement survey or an original survey, a registered land surveyor shall be responsible to set monuments in accordance with the following:

(1) Except as provided in subsection (a)(7) [subdivision (7)], a monument, as defined in subsections (a)(2) through (a)(6) [subdivisions (2) through (6)], shall be set at every lot or parcel corner being surveyed, including the interior lots of a subdivision. Corners to be set include the beginning and end of curves and the intersection of lines except where the setting of a monument near another monument would cause confusion. Further, a monument is not required to be set if there is an existing monument at the corner that is within the limits of theoretical uncertainty for the class of survey being performed.

(2) Monuments set in unpaved locations shall be five-eighths ($\frac{5}{8}$) inch diameter or larger iron or steel rods, reinforcement bars, or galvanized pipes weighing a minimum of one (1) pound per foot and being at least twenty-four (24) inches long and set with not less than eighteen (18) inches below grade. Other monuments may be used if they are made of material of similar or greater durability, size, and character and can be found by a device capable of detecting ferrous or magnetic objects.

(3) Where practical, monuments in pavement shall be set according to the requirements contained in subsection (a)(2) [subdivision (2)]. However, when it is not practical to set a monument in accordance with subsection (a)(2) [subdivision (2)], then a two (2) inch or longer, one-fourth ($\frac{1}{4}$) inch or larger diameter, magnetic concrete nail, or similar magnetic monument, shall be set.

(4) Monuments set under subsection (a)(2) or (a)(3) [subdivision (2) or (3)] shall have a substantial plastic or metal tag or cap permanently affixed showing the registered land surveyor's surname and professional license number or board issued firm/agency identification number.

(5) Where monuments as defined in subsection (a)(2) or (a)(3) [subdivision (2) or (3)] cannot be set, the survey points must be marked by a drill hole, cut cross, notch, or other similar permanent mark and referenced to any nearby witness monuments or permanent objects, such as building foundations or concrete head walls.

(6) Monuments required by local ordinances shall be set provided they meet or exceed the requirements in subsections (a)(2) and (a)(3) [subdivisions (2) and (3)].

(7) Except at interior lot corners not adjoining a street right-of-way line, where it is not possible or practical to set a monument at the survey point, then a monument shall be offset and the location shall be selected so that the monument lies on a line of the survey or on a prolongation of such line. Offset monuments shall be identified as such on the plat and, if possible, in the field. However, if existing monuments fall within the theoretical uncertainty of the survey, a monument will not be required to be set.

(8) If recovery of the monument would be difficult due to the topography or other features of the land, the monuments shall be witnessed or referenced in such a manner that will facilitate their recovery.

(9) Monuments shall be marked, such as ribbon, paint, or lath, to facilitate the recovery of the monument by the client.

(10) It shall be the responsibility of the land surveyor certifying the subdivision plat to set all monuments required by this section in a new subdivision.

(b) Monuments shall be set prior to providing the client with the survey documents required by this rule. However, in the case of new subdivisions where, in the opinion of the surveyor, it is probable the individual lot monuments will be disturbed by construction, only the perimeter of the subdivision, or section thereof, must be monumented prior to recordation. In this situation, the setting of the individual lot monuments may be delayed until no later than:

(1) after construction is complete (including buildings); or

(2) two (2) years after recordation of the subdivision plat or, if the subdivision is platted by sections, after recordation of each section;

whichever occurs first. In new subdivisions, if monuments are to be set prior to recording, then the placement of monuments shall be shown on the subdivision plat. If monuments are to be set after construction is complete, the surveyor shall record an affidavit, cross-referenced to the recorded plat, showing which monuments were set and which were found, the dates the monuments were set or found, together with a certification that states to the best of the surveyor's knowledge and belief the information contained in the affidavit is true and correct. Nothing in this subsection shall be construed to require the surveyor to wait until construction is completed to place monuments.

(c) A surveyor is not required to replace or restore any monument that the surveyor has set that has been moved, disturbed, or destroyed after its original placement for the current survey.

(d) Identification numbers, other than registered land surveyor's registration numbers, used by a land surveying firm or government agency under subsection (a)(2) or (a)(3) must be assigned and authorized for use by the state board of registration for land surveyors upon written request. Request for firm or agency numbers must be in writing on forms provided by the board. This certificate shall bear the signature, registration number, and seal of the registered land surveyor and the date of the certificate.

(b) Any new subdivision plat shall show only the information required by the applicable subdivision control ordinance or other regulation.

(c) Any new subdivision or original survey plat recorded must be cross-referenced to a previously recorded survey, which conforms to this rule, of the tract which contains it.

(d) The certificate for a new subdivision must state that there has been no change from the matters of survey revealed by the

cross-referenced survey, or any prior subdivision plats contained therein, on any lines that are common with the new subdivision. 865 IAC 1-12-22 Measurements for route surveys

Authority: IC 25-21.5-2-14
Affected: IC 25-21.5

Sec. 22. (a) When conducting a route survey, the land surveyor shall be responsible to use the minimum standards of measurement provided for in this section. Laws affecting route surveys or client specifications may set forth technical minimums for route surveys more stringent than those stated in this section.

(b) Measurements generally shall be shown on the route survey plat with a number of significant figures representative of the precision of the work.

(c) The measurements specifications contained in subsection (d) will apply to all of the following items shown on a route survey:

- (1) The controlling survey line.
- (2) Survey ties to:
 - (A) the nearest United States Public Land Survey subdivision corners that are reasonably accessible on both sides of the controlling survey line; or
 - (B) monuments with established state plane coordinates.
- (3) All monuments, reference monuments, and any ties thereto, that are set relative to the controlling survey line.
- (d) The following measurement specifications shall apply to all route surveys:
 - (1) All angles shall be based upon the mean of two (2) direct and two (2) reverse position readings of the instrument telescope.
 - (2) The instrument must have a direct (not estimated) angular reading capability as follows:
 - (A) Twenty (20) seconds of arc for micrometer reading theodolites.
 - (B) One (1) minute of arc for scale reading theodolites.
 - (C) Ten (10) seconds of arc for electronic theodolites.
 - (3) The instrument must have the capability of allowing an estimated reading as follows:
 - (A) Ten (10) seconds of arc for micrometer reading theodolites.
 - (B) One-tenth (0.1) of a minute of arc for scale reading theodolites N.A. for electronic theodolites.
 - (4) Any angle which exceeds the mean by more than the following amount must be rejected and the set of angles remeasured:
 - (A) Ten (10) seconds of arc for micrometer reading theodolites.
 - (B) Two-tenths (0.2) of a minute of arc for scale reading theodolites.
 - (C) Ten (10) seconds of arc for electronic theodolites.
 - (5) All distance measurements must be made with a properly calibrated EDM or steel tape, applying atmospheric, temperature, sag, tension, slope, scale factor, and sea level corrections, as necessary.
 - (6) Distance measurements to be used in computing accuracy or closure for those items in subsection (c) cannot be less than the following amounts:
 - (A) Fifty-four (54) meters for an EDM having an error of five (5) millimeters per manufacturer's specifications independent of distance.
 - (B) One hundred two (102) meters of an EDM having an error of ten (10) millimeters per manufacturer's specifications independent of distance.
 - (C) Fourteen (14) meters for calibrated steel tape.
 - (7) If a closed loop is run, the angular and linear closures must comply with the following requirements:
 - (A) Fifteen (15) seconds of arc times \sqrt{N} for maximum angular closure error, where N is the number of stations.
 - (B) 1:10,000 for minimum linear error of closure precision ratio after angles are balanced and closure is calculated.

(e) The use of a more precise instrument does not change any of the specifications contained in subsection (d), such as number of angles turned. Sec. 23. (a) When conducting a route survey, a registered land surveyor shall do the following:

- (1) Furnish the client with copies of the route survey plats.
- (2) Furnish the client with a written surveyor's report which, in addition to other pertinent data, gives the registered land surveyor's professional opinion of the cause and the amount of uncertainty in the lines and corners found or established by the survey because of any of the following:
 - (A) Availability and condition of referenced monuments.
 - (B) Occupation or possession lines.
- (3) Record the route survey plat and any subsequent revisions as defined in section 25 of this rule, together with the associated

surveyor's report defined in this subsection, in the files of the county recorder's office in the county where the property is located on or before the date of acquisition of any tracts relative to the plat.

(b) An accurate description for all parcels to be acquired shall be furnished to the client. The description shall call for all that part of the owner's land which lies within the total acquisition tract. The acquisition tract or tracts shall be depicted on, or described relative to, the recorded plat of route survey or any subsequent recorded revisions of the recorded plat of route survey which contain said land. 865 IAC 1-12-24 Route survey monumentation

Authority: IC 25-21.5-2-14

Affected: IC 25-21.5

Sec. 24. (a) When conducting a route survey, a registered land surveyor shall be responsible to set monuments in accordance with the following:

(1) Controlling survey lines which are to be shown on the route survey plat shall be monumented at each angle point and at intervals that typically do not exceed one thousand (1,000) feet.

(2) The monuments shall be of a type and character, and set in a manner providing a degree or permanency, consistent with the terrain, physical features, intended use, and character of the point being marked.

(3) Monuments set in unpaved locations shall be five-eighths (5/8) inch diameter or larger iron or steel rebars or pipes weighing a minimum of one (1) pound per foot and being at least twenty-four (24) inches long. Other monuments may be used if they are made of material of similar durability which includes an element that can be found by a device capable of detecting ferrous or magnetic objects. Such monuments shall have a substantial plastic or metal cap permanently affixed thereto showing the registered land surveyor's professional license number and/or the name or identification number of the land surveying firm or government agency.

(4) Where practical, monuments in paved locations shall be set according to the requirements contained in subdivision (3).

(5) Survey points, where monuments as defined in subdivision (3) or (4) cannot readily be set, must be marked by a drill hole, cut cross, notch, railroad spike, or similar permanent mark and referenced to any nearby witness monuments or permanent objects such as building foundations or concrete head walls.

(6) Any comparable or better monuments required by more stringent local ordinances shall be set.

(7) Monuments shall be referenced in such a manner that will facilitate recovery of the monuments. A minimum of three (3) permanent points referencing each controlling survey line monument shall be established, preferably at locations outside the planned construction area.

(8) All monuments shown on the recorded route survey plat that are reset by an Indiana land surveyor must be reset according to the rules used for the original monuments. A survey plat of this resurvey shall be recorded in the office of the county recorder where the resurvey was done within ninety (90) days of survey certification and shall be cross-referenced to the original route survey plat.

(9) Monuments shall be marked (ribbon, paint, or lath) to facilitate the recovery of the monuments by the client.

(b) Subsection (a)(3) through (a)(4) shall apply only to monuments set after December 31, 1991.

(c) Any identification numbers, other than the registration number of the registered land surveyor, used by a land surveying firm or government agency under subsection (a)(3) or (a)(4) must be assigned and authorized for use by the state board of registration for land surveyors upon written request. 865 IAC 1-12-27 Surveyor location reports; purpose; scope

Authority: IC 25-21.5-2-14
Affected: IC 25-21.5

Sec. 27. (a) Surveyor location reports are designed for use by a title insurance company with loan policies on small tracts containing a one (1) to four (4) family house even if now used for commercial purposes.

(b) A registered land surveyor does not assume responsibility regarding the location or existence of any underground use except that indicated by readily visible surface evidence. The client shall be responsible for providing any title documents other than recorded plats that are required for the report.

(c) The report must be done according to its record description, if any. No corner monuments are required to be set. The uncertainty of location for the report shall not exceed plus or minus one (1) foot on tracts in platted subdivisions or two (2) feet for small unplatted tracts, unless otherwise specified and explained on the drawing.

(d) House locations more than one hundred (100) feet from an exterior boundary may be estimated and need not comply with

subsection (c).

(e) Obtaining accurate and complete data on or near the perimeter of larger tracts is beyond the scope of the report. Therefore, on larger tracts, location data for items more than one hundred (100) feet from the house may be estimated and need not comply with subsection (c), and, on such larger tracts, the data required by section 28(1) through 28(5) of this rule may be incomplete. 865 IAC 1-12-28 Surveyor location reports; requirements

Authority: IC 25-31-1-7

Affected: IC 25-31-1

Sec. 28. When conducting a surveyor location report, a registered land surveyor shall do the following:

(1) Briefly describe and show the location of visible evidence of possession including, but not limited to, the following:

(A) Buildings.

(B) Fences.

(C) Hedgerows.

(D) Other improvements appurtenant to either the surveyed property or the adjoining property.

Show the location of this evidence by the shortest dimension to the nearest adjacent boundary line or any depicted easement line in order to reveal the extent of any possible encroachment. The statement "No visible evidence of possession found" must be noted along record boundary lines when applicable. (For this purpose, monuments found do not constitute evidence of possession.)

(2) Show the location, dimensions, and a brief description of all buildings or structures on the property including, but not limited to, the following:

(A) Driveways.

(B) Parking lots.

(C) Such personal property as aboveground swimming pools or yard barns.

Show the location of such buildings adjacent to the boundary lines by the shortest distance thereto and dimension any violation of a depicted easement or building setback line. Identify any buildings that appear to have no foundation and may be readily moveable. Show the name of the occupant, if easily available, and any client identification data requested.

(3) Show the location of and briefly describe any visible evidence of use by others such as for roadways, utility lines, or driveways or possible joint use of driveways (do not label as "joint" or "common"), which may affect the surveyed tract. Note the name of the user, if marked (for example, joint use by electric, telephone, and cable television companies on poles marked with electric company tags). With respect to any railroad on or adjoining the property, note if the tracks have been removed. If that is the case, note any visible evidence of construction, trenching, or other use observed on or along said railroad.

(4) Show the location and recording data for any easements or setback lines on the tract as determined from recorded documents provided by the client or from a recorded plat.

(5) Show the location of the perimeter of any visible evidence of cemeteries found on the surveyed tract.

(6) Show the approximate size, location, and brief description of any lakes, ditches, streams on the tract, or any known legal drains on or within seventy-five (75) feet of the property. Detailed locations are required when a boundary is determined thereby or when buildings or other improvements are located within a legal drain easement.

(7) Show the location of any road, street, alley, or other public way abutting or on the surveyed property with the width of the travelled way, known right-of-way lines, name, location, and source of any known name or right-of-way information indicated. If not known, note which records, if any, were searched. Physical access to the property, or lack thereof, must be shown.

(8) Show the drawing scale, a north arrow, property description and address, surveyor's job number, company name, certificate, signature, and seal, client name, and the names of those to whom the report is certified.

(9) Show a report/certificate date less than thirty (30) days from the date of delivery.

(*State Board of Registration for Land Surveyors; 865 IAC 1-12-28; filed Jul 17, 1991, 4:30 p.m.: 14 IR 2253; readopted filed May 22, 2001, 9:55 a.m.: 24 IR 3237; filed Nov 15, 2002, 3:33 p.m.: 26 IR 1105*) NOTE: 864 IAC 1.1-13-43 was renumbered by

The content and format of the certificate shall be as shown, but the type size and spacing may be altered to suit so long as the finished form is neat and clearly legible. The size of the sheet or sheets for the reports shall be no less than eight and one-half (8 1/2) inches by eleven (11) inches and no greater than eleven (11) inches by seventeen (17) inches.
