

ARTICLE 2. TUBERCULOSIS CONTROL

Rule 1. General Regulations

410 IAC 2-1-1 Definitions

Authority: IC 16-19-3-4; IC 16-19-3-5

Affected: IC 16-41

Sec. 1. Definitions. Unless the provisions of the context otherwise require, the definitions herein contained shall govern the construction of these regulations [410 IAC 2-1].

(1) Tuberculosis Infection—Any person who gives evidence of tuberculosis infection by means of a positive tuberculin reaction or clinical findings or x-ray or bacteriological examination without regard to development or activity of disease.

(2) Infectious State—A case of pulmonary tuberculosis in which the chest x-ray interpretation, the laboratory findings, the physical findings or any combination of these informative sources indicate active disease, and in all cases of extrapulmonary form in which tubercle bacilli are found in the discharge from the disease process.

(3) Suspect Case—Any person having a pulmonary or other lesion that may, but is not yet proven to be, tuberculosis; also, any person with symptoms suggestive of tuberculosis, with or without x-ray shadows.

(4) Contact—An individual who has been in intimate association with an infectious case of tuberculosis in the home or equivalent.

(5) Associate—Any person in close association with a tuberculin reactor, as differentiated from a person in close association with a diagnosed case of tuberculosis.

(6) Diagnostic X-ray—This is interpreted as a 14" × 17" film.

410 IAC 2-1-2 Reporting requirements

Authority: IC 16-19-3-4; IC 16-19-3-5

Affected: IC 16-41

Sec. 2. Type of Cases to be Reported. In addition to the identifying information the following shall be reported:

(1) Pulmonary Disease—The extent of the pulmonary lesions and the clinical status as interpreted and defined in the 1969 edition of "Diagnostic Standards and Classifications of Tuberculosis", published by the National Tuberculosis Association, New York, New York, copies of which are available in the Supreme Court Library, office of the Attorney General and the office of the Commissioner of the State Board of Health.

(2) Extrapulmonary—The site and clinical status of disease.

(3) Positive Tuberculin Reactor—The measurement of the Mantoux tuberculin test, using Intermediate PPD(t), in millimeters, diagnostic chest x-ray findings and final diagnosis as either primary active, primary inactive or adult tuberculosis. If other than the Mantoux skin test is used, all positive reactors to such tests are to be confirmed by the Mantoux skin test.
