SUBJECT: Roster of Indiana Waterways Declared Navigable or Nonnavigable

HISTORY: The original bulletin was published at 15 IR 2385 (July 1, 1992). The Natural Resources Commission in March 1997 approved a first revision (published at 20 IR 2920) that superseded the original bulletin. The second revision (20061011-IR-312060440NRA) made technical amendments correcting code citations and an Internet address. The third amendment (20080611-IR-312080426NRA) added sections of the Tippecanoe River as navigable in White County, Starke County, and Pulaski County, and corrected an Internet address. This fourth amendment updates the contact information for the Commission and its Division of Hearings and corrects an Internet address.

A searchable version of this bulletin is available through the Natural Resources Commission Internet Website at:

I. NAVIGABILITY

Property rights relative to Indiana waterways often are determined by whether the waterway is “navigable.” Both common law and statutory law make distinctions founded upon whether a river, stream, embayment, or lake is navigable.

A landmark decision in Indiana with respect to determining and applying navigability is State v. Kivett, 228 Ind. 629, 95 N.E.2d 148 (1950). The Indiana Supreme Court stated that the test for determining navigability is whether a waterway:

was available and susceptible for navigation according to the general rules of river transportation at the time [1816] Indiana was admitted to the Union. It does not depend on whether it is now navigable....The true test seems to be the capacity of the stream, rather than the manner or extent of use. And the mere fact that the presence of sandbars or driftwood or stone, or other objects, which at times render the stream unfit for transportation, does not destroy its actual capacity and susceptibility for that use.

A modified standard for determining navigability applies to a body of water that is artificial. The test for a man-made reservoir, or a similar waterway that did not exist in 1816, is whether it is navigable in fact. Reed v. United States, 604 F. Supp. 1253 (1984).

The court observed in Kivett that “whether the waters within the State under which the lands lie are navigable or non-navigable, is a federal” question and is “determined according to the law and usage recognized and applied in the federal courts, even though” the waterway may not be “capable of use for navigation in interstate or foreign commerce.” Federal decisions applied to particular issues of navigability are useful precedents, regardless of whether the decisions originated in Indiana or another state.

The primary issue in Kivett was ownership of the riverbed from which the defendant was removing materials. If the waterway was navigable on the date of statehood, title to the bed of the river passed to the state of Indiana and could not ordinarily be conveyed incident to the adjoining riparian property. Also, once a waterway is found to be navigable it remains so, even if the waterway is no longer used for purposes of commercial navigation. United States v. United States Steel Corporation, 482 F.2d 439 (7th Cir. 1973).

In the absence of a contrary state boundary, the appropriate line of demarcation for a navigable waterway is the ordinary high watermark. The Indiana Water Resource, Governor's Water Resource Study Commission, State of Indiana (Indiana Department of Natural Resources, 1980), page 107. The Natural Resources Commission has also adopted this standard by rule. 312 IAC 6-1. If not navigable, title to the bed of the river passes to the adjacent property owner or owners.

Ownership is not the only issue determined by whether a waterway is navigable. Public recreational and commercial usage of the surface of a river or stream often depends upon whether the water is navigable. Other legal foundations may, however, authorize public usage. A prescriptive easement may exist. A waterway may be a “public freshwater lake” subject to IC 14-26-2 and 312 IAC 11-1 through 312 IAC 11-5. Pursuant to IC 14-29-8, the Natural Resources Commission may, by rule, declare a waterway to be a “recreational stream.”

State legislation also establishes regulatory functions that rest upon a determination of navigability. For example, a permit is typically required from the Indiana Department of Natural Resources before a person can:

• place, fill, or erect a permanent structure in;
• remove water from; or
• remove material from;

a navigable waterway. IC 14-29-1-8 and 312 IAC 6.

Other notable regulatory standards applicable to navigable waters include IC 14-18-6 (Lake Michigan fills), IC 14-29-4-5 (dedication of channels into navigable waters), IC 14-19-1-1 (general charge of Indiana navigable waters placed in DNR), and IC 14-29-3 (removal of sand and gravel from the beds of navigable waters).
II. ESTABLISHING A ROSTER

Despite the legal significance of determining whether a particular waterway is or is not navigable, a comprehensive roster of Indiana waters declared navigable has not existed. In part, this absence can be explained by the essentially judicial character of the doctrine of navigability. Since a determination of navigability is ultimately based upon a judicial finding which is both waterway and site specific, any roster is subject to criticism because it is incomplete.

In addition, legislative declarations have identified specific waters as being navigable (or public highways). Although most legislative declarations occurred before 1850, more recently governmental agencies have also determined questions of navigability. Notable examples include the U.S. Army Corps of Engineers, the Federal Energy Regulatory Commission, and, at the state level, the Indiana Natural Resources Commission. A determination by any of these legislative or administrative entities is subject to judicial scrutiny and modification.

Even within these limitations, a roster of waters declared navigable can be productive for efforts to regulate and manage the state’s waters. With an understanding that any listing of waterways declared navigable is necessarily imperfect and subject to adjustments as new decisions are made, the roster which follows is intended to aid in the regulatory process and in a general public awareness of waterway usage.

A few explanatory remarks are appropriate to the structure of the roster. A waterway is presumed to be navigable at all points downstream from a determination of navigability. A judicial determination as to whether a particular water is or is not navigable generally supersedes a legislative or administrative decision. Unless otherwise refuted, a legislative determination of navigability is presumed to demonstrate historical usage of a waterway for navigation, and a later statutory repeal does not negate the navigability of the waterway.

A declaration of navigability or nonnavigability must be based upon a primary source. These primary sources are a declaration by a court, the legislature, or an agency with jurisdiction over navigable waters. A waterway declared by a primary source to be nonnavigable is identified in brackets. If a waterway is unlisted, no declaration of navigability or nonnavigability has been located from a primary source.

Secondary sources may be applied to determine the geographic limitations of navigability for a particular waterway. Secondary sources include courthouse records, published county histories, periodicals, newspaper articles, interviews, and similar evidence. For example, in the early 19th century, the Indiana General Assembly sometimes identified a stream as being a public highways downstream from a particular mill. Secondary sources are typically applied to determine where the mill is believed to have been located.

Reported state or federal court decisions are applied in seeking to resolve legal issues of navigability which bear upon particular waters (example: where a navigable river is channelized, the new channel becomes navigable and the former channel loses its navigable character when sedimentation causes the bed to surface). Although this roster does not include citations to the authorities applied in determining navigability, these authorities can be obtained through the Indiana Natural Resources Commission.
